# Integrating Pictometry Critical 360° Imagery with Campus Maps

#### Presenters: Joseph Weinstein and Jonathan Ramos CCBC Geospatial Applications Program

#### Background - CCBC Campus Mapping Project

- Phase 1 Complete (but on-going...)
  - Digitize campus facilities (buildings and grounds)
- Phase 2 In Progress
  - Obtain 360° imagery of all campus facilities (building interior spaces and grounds)
  - Integrate 360° imagery with existing campus data layers
- Phase 3 In Development
  - Campus Web Mapping Application
    - Level 1-Open Web Portal Select access to campus images (unsecured)
    - Level 2-Faculty Limited access to building imagery
    - Level 3-Room Schedulers Functional secure access to building imagery
    - Level 4-Facilities and Maintenance Functional secure access to building and grounds imagery
    - Level 5-Public Safety Functional secure access to building and grounds imagery connected with live data feeds; linked to BLAZER alert system

# Phase 2

- Obtain and Integrate Pictometry Critical 360° Imagery with Existing Campus GIS Data
  - Allow users to identify campus buildings and navigate the interior spaces of those buildings
  - Allow users (with appropriate credentials) access to attribute data and image functionality

#### MSGIC 2015 Winter Quarterly Meeting

BRIDGING THE GAP BETWEEN THE EARTH AND MAP

Applications

1. Obtain images of all campus interior spaces using a camera with a fisheye lens – 2 images per scene

2. Stitch the images to create a 360° scene using iPIX Interactive Studio

#### 3. Link the scenes using the i-Linker software

4. Create an interactive point feature class in the campus geodatabase showing the location of the images that links each point to its appropriate image
